Liquid is a form of matter. It flows. It moves, like water and oil. A liquid has weight and volume, like a solid. But it does not have its own shape. Instead, it takes on the shape of its container. A liquid in a cup has the same shape as the cup. Pour it in a bowl. Then it will take on the shape of the bowl. You can see a liquid. You can also touch it. In fact, a liquid is a very important form of matter. Our bodies are mostly water! It helps our body stay healthy!

16. What is NOT true?

- ① It is water.
- ② **We can't touch liquid but can see it.**
- ③ Our body can't be healthy without water.
- ④ Oil is liquid.

In the Greek myths, twelve gods and goddesses appeared. They lived on Mount Olympus. We call them Olympian gods. Most of the gods were siblings or children of the king, Zeus. Zeus ruled the world of the gods. Hera, Zeus's wife, was the goddess of marriage. One of Zeus's brothers, Poseidon, was the god of the ocean. Athena was born from Zeus's head. She was the ruler of

wisdom. Each of the gods had a magical power. They watched down over the human world. And they ruled the world with their power.

17. Who is Athena?

- ① the goddess of marriage
- ② **the ruler of wisdom**
- ③ the god of the ocean
- ④ Zeus's sister

Why are World Heritage sites important to culture? They can teach us culture. They can also show us history. For example, Italy has Venice. The whole of Venice is full of great buildings and works of art. This city is historically important. We should keep it well. So, UNESCO named it a World Cultural Heritage site. China's tomb of the first emperor is another World Heritage site. In the tomb, there are thousands of terracotta warriors, horses, and weapons. They are made of clay. The tomb shows us the power of the emperor at that time.

18. Why is China's tomb of the first emperor special?

- ① It is because UNESCO named it a World Heritage sites.
- ② It is because it has full of great works of art.
- ③ It is because Chinese like it.
- ④ **It is because it has thousands of historical things.**

Food gives us energy. With this energy, we grow and move.

We can turn food into energy through digestion. First, teeth break food down into small pieces. The pieces pass through a tube, then reach the stomach. In the stomach, the food mixes with stomach acid. It ① _____ food for easy digestion. Next, the food takes a long journey through tubes in your body. The tubes take in nutrition and water from the food. At last, the waste passes out of the body.

19. Why the food mixes with stomach acid?

- ① for easy digestion
- ② for a long journey
- ③ for easy breathing
- ④ for better taste
